## Low Power, 4 MHz GBW, Rail-to-Rail Input-Output Operational Amplifier

The LM7301 operational amplifier provides high performance in a wide range of applications. It features common mode input range beyond the rails, full rail-to-rail output swing, large capacitive load driving capability, and low signal distortion.

The LM7301 operates on supplies of 1.8 V to 32 V and is excellent for a wide range of applications in low power systems. With a gain-bandwidth of 4 MHz while consuming only 0.6 mA supply current, it supports portable applications where higher power devices would reduce battery life.

The wide input common mode voltage range allows the LM7301 to be driven by signals 100 mV beyond both rails, eliminating concerns associated with exceeding the common-mode voltage range. The capability for rail-to-rail output swing provides the maximum possible dynamic range at the output, which is particularly important when operating on low supply voltages.

The LM7301 is available in a space-saving TSOP-5 package.

### Features

- Wide Supply Range: 1.8 V to 32 V
- Input Common Mode Voltage Range Extends Beyond Rails:  
 $V_{EE} - 0.1 \text{ V}$  to  $V_{CC} + 0.1 \text{ V}$
- Rail-to-Rail Output Swing: 0.07 V to 4.93 V at  $V_S = 5 \text{ V}$
- Wide Gain-Bandwidth: 4 MHz
- Low Supply Current: 0.60 mA at  $V_S = 5 \text{ V}$
- High PSRR: 104 dB at  $V_S = 5 \text{ V}$
- High CMRR: 93 dB at  $V_S = 5 \text{ V}$
- Excellent Gain: 97 dB at  $V_S = 5 \text{ V}$
- Capable of Driving a 1 nF Capacitive Load
- Tiny 5-pin SOT23 Package Saves Space
- These Devices are Pb-Free, Halogen Free/BFR Free and are RoHS Compliant

### Typical Applications

- Portable Instrumentation
- Signal Conditioning Amplifiers/ADC Buffers
- Active Filters
- Modems
- PCMCIA Cards

## PIN FUNCTION DESCRIPTION

Pin No.	Pin Name	Description
1	Output	Amplifier Output
2	$V_{EE}$	Negative Power Supply
3	Non-inverting Input	Non-inverting Amplifier Input
4	Inverting Input	Inverting Amplifier Input
5	$V_{CC}$	Positive Power Supply

## ABSOLUTE MAXIMUM RATINGS

Rating	Symbol	Value	Unit
Input Voltage Common Mode Range	$V_{CM}$	$V_{CC} + 0.3\text{ V}, V_{EE} - 0.3\text{ V}$	V
Differential Input Voltage Range	$V_{diff}$	15	V
Supply Voltage ( $V_{CC} - V_{EE}$ )	$V_S$	35	V
Current at Input Pin	$I_{IN}$	$\pm 10$	mA
Current at Output Pin (Note 1)	$I_{OUT}$	$\pm 20$	mA
Current at Power Supply Pin	$I_{CC}$	25	mA
Maximum Junction Temperature (Note 2)	$T_{J(max)}$	150	$^{\circ}\text{C}$
Storage Temperature Range	$T_{STG}$	-65 to 150	$^{\circ}\text{C}$
ESD Capability, Human Body Model (Note 3)	$ESD_{HBM}$	2.5	kV

Stresses exceeding Maximum Ratings may damage the device. Maximum Ratings are stress ratings only. Functional operation above the Recommended Operating Conditions is not implied. Extended exposure to stresses above the Recommended Operating Conditions may affect device reliability.

1. Applies to both single supply and split supply operation. Continuous short circuit operation at elevated ambient temperature can result in exceeding the maximum allowed junction temperature of  $150^{\circ}\text{C}$ .
2. The maximum power dissipation is a function of  $T_{J(max)}$ ,  $\theta_{JA}$ , and  $T_A$ . The maximum allowable dissipation at any ambient temperature is  $P_D = (T_{J(max)} - T_A)/\theta_{JA}$ . All numbers apply for packages soldered directly to a printed circuit board.
3. Human Body Model, applicable std. MIL-STD-883, method 3015.7.

## THERMAL CHARACTERISTICS

## APPLICATIONS INFORMATION

## GENERAL INFORMATION

The LM7301 is ideal in a variety of situations due to low supply current, wide bandwidth, wide input common mode range extending 100 mV beyond the rails, full rail-to-rail output, high capacitive load driving ability, wide supply voltage (1.8 V to 32 V), and low distortion. The high common mode rejection ratio and full rail-to-rail input range provides precision performance, particularly in non-inverting applications where the common mode error is added directly to the other system errors.

## CAPACITIVE LOAD DRIVING

The LM7301 is capable of driving large capacitive loads. A 1000 pF load only reduces the phase margin to about 25°.

## WIDE SUPPLY RANGE

High PSRR and CMRR provide precision performance when the LM7301 is operating on a battery or other unregulated supplies. This advantage is further enhanced by the very wide supply range of 1.8 V to 32 V. In situations where highly variable or unregulated supplies are present, the excellent PSRR and wide supply range will maintain this precision performance, even in such adverse supply conditions.

## SPECIFIC ADVANTAGES OF 5-Pin TSOP

The most apparent advantage of the 5-pin TSOP is that it can save board space, a critical aspect of any portable or miniaturized system design. The need to decrease the overall system size is inherent in any portable or lightweight system

application. Furthermore, the low profile can help in height limited designs, such as consumer hand-held remote controls, sub-notebook computers, and PCMCIA cards.

An additional advantage of the tiny TSOP-5 package is that it allows better system performance due to ease of package placement. Because the package is so small, it can fit on the board right where the op amp needs to be placed for optimal performance, unconstrained by the usual space limitations. This optimal placement allows for many system enhancements, which cannot be easily achieved with the constraints of a larger package. For example, problems such as system noise due to picking up undesired digital signal can be easily reduced or mitigated. This pick-up problem is often caused by long wires in the board layout going to or from an op amp. By placing the tiny package closer to the signal source and allowing the LM7301 output to drive the long wire, the signal becomes less sensitive to such noise. An overall reduction of system noise results.

Often, trying to save space by using dual or quad op amps causes complicated board layouts due to the requirement of routing several signals to and from the same place on the board. Using the tiny op amp eliminates this problem.

## LOW DISTORTION, HIGH OUTPUT DRIVE CAPABILITY

The LM7301 offers excellent low distortion performance, with a THD+N of 0.02% at  $f = 10$  kHz. Low distortion levels are offered even at in scenarios with high output current and low load resistance.

## TYPICAL APPLICATIONS

## HANDHELD REMOTE CONTROLS

The LM7301 offers outstanding specifications for applications requiring balance between speed and power. In applications such as remote control operation, where high bandwidth and low power consumption are needed, the LM7301 performance can easily meet these requirements.

## OPTICAL LINE ISOLATION FOR MODEMS

The combination of low distortion and high load driving capabilities of the LM7301 make it an excellent choice in modems for driving opto-isolator circuits to achieve line isolation. This technique prevents telephone line noise from coupling onto the modem signal. Superior isolation is achieved by coupling the signal optically from the computer modem to the telephone lines; however, this also requires a

low distortion at relatively high currents. Due to its low distortion at high output drive currents, the LM7301 fulfills this need, in this as well as other telecom applications.

## REMOTE MICROPHONE IN PERSONAL COMPUTERS

Remote microphones in computers often utilize a microphone at the top of the monitor, which requires driving a long cable in a high noise environment. One method often used to reduce the noise is to lower the signal impedance to reduce the noise pickup. In this configuration, the amplifier usually requires 30 db to 40 db of gain, at bandwidths higher than most low-power CMOS parts can achieve. The LM7301 offers the tiny package, higher bandwidth, and large output drive capability necessary for this application.
